DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on December 8, 2003 has been entered.

Please Note: the Applicant in the amendment of August 26, 2002 canceled Claims 8 and 18.

Response to Arguments

Applicant's arguments filed December 8, 2003 have been fully considered but they are not persuasive.

Drumheller anticipates the present invention. The argument regarding whether Drumheller discloses an endovascular graft was previously addressed in office action 19. Contrary to the Applicant's argument, closer inspection of the structure of the text reveals Drumheller discloses *either* a synthetic graft or polymer coated metallic stent can be used for improvement of vascular patency (col. 8, lines 37-60). Either way one would read the text, the Applicant is only arguing an intended use of the graft. The Applicant admits on page 1, lines 12-15 that endovascular grafts "can be broadly defined as vascular grafts that are positioned within existing veins and arteries."

Application/Control Number: 09/519,246

Art Unit: 3738

Drumheller does disclose a graft-covered stent (i.e. Example 41, col. 29) that can be coated with the same claim substances of the present invention, including **procoagulant** factors (col. 8, lines 46-48) and therefore meets the structural limitations of the claimed invention.

The Applicant does not claim a particular size for the endovascular graft. However, even if the only difference between the prior art and the claims are a recitation of relative dimensions of the claimed device and a device having the claimed relative dimensions would not perform differently than the prior art device, the claimed device is not patentably distinct from the prior art device. The Applicant fails to claim and only argues that an endovascular stent is "considerably smaller" than a vascular graft. However, it is well known in the art that both endovascular stents and vascular grafts can both be small or large depending on the vessel intended for their use. For example, an endovascular graft would be large if used for an abdominal aorta. In response to Applicant's argument that the combination of Guire and Marin et al. fails to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., to prevent endoleaking) are not recited in rejected claims 1, 5, 10, 11 and 15. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). Furthermore, the primary reference of Guire discloses the covalently bonded coating on a graft as presently claimed. Marin et al. is a teaching reference that further adds the stent to create the stent-graft claimed, and the fixation "without sewing" is the motivation to combine the references, as suggested in Marin et

Application/Control Number: 09/519,246

Art Unit: 3738

al. (col. 1, lines 66-67) and as noted in the prior two office actions. Therefore, the combination of Guire and Marin et al. meets the structural limitations presently claimed.

Both Marin et al. and Guire disclose grafts and are therefore in similar fields.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 6-7, 9, 11, 13, 16-17, 19 and 21 remain rejected under 35 U.S.C. 102(b) as being anticipated by Drumheller (5,874,165). Drumheller discloses an endovascular graft comprising collagen, von Willebrand factor or thrombin (col. 8, lines 37-60) on ePTFE (col. 1, lines 41-59).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 5, 10, 11, and 15 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Guire (4,979,959) in view of Marin et al. (5,443,477). Guire discloses a vascular graft (col. 1, lines 31-32) with a thrombogenic agent such as collagen

Application/Control Number: 09/519,246

Art Unit: 3738

covalently bonded to its surface by the activation of photoreactive groups (col. 2, lines 38-46) however Guire fails to disclose the vascular graft as part of an endovascular stent-graft. Marin et al. teaches an intraluminal stent that can be reliably and readily affixed to any graft material (col. 2, lines 9-19) thus making an endovascular graft, which permits fixation of the graft to an arterial wall without sewing (col. 1, lines 66-67). It would have been obvious to one of ordinary skill in the art to combine the teaching of an intraluminal stent affixed to a graft material, as taught by Marin et al., to a vascular graft as per Guire, in order to permit fixation of the graft to an arterial wall without sewing.

Conclusion

All claims are drawn to the same invention claimed in the application prior to the entry of the submission under 37 CFR 1.114 and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the application prior to entry under 37 CFR 1.114. Accordingly, **THIS ACTION IS MADE**FINAL even though it is a first action after the filing of a request for continued examination and the submission under 37 CFR 1.114. See MPEP § 706.07(b).

Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 3738

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas C. Barrett whose telephone number is (703) 308-8295. The examiner can normally be reached Tuesday-Friday between 9:00 A.M. and 6:00 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Corrine McDermott can be reached on (703) 308-2111. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9306 for regular communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0858.
